

CASE STUDY

# Iron Ore Mine Upgrade, Australia

MINING & METALS

[tgloba.com](http://tgloba.com)

# facts & figures

## CLIENT

An Australian mining major

## LOCATION

Dalian, China, to a mining site near Newman, Australia

## PROJECT PERIOD

2019

## TOTAL CARGO WEIGHT / VOLUME

62,000 mt

## SCOPE OF WORK

TGP chartered three ocean vessels to carry the modules from Dalian, China, to Port Hedland, Australia. After discharging the cargo in Port Hedland, TGP transported the modules 400 km to the mining site. Although the cargo measured up to 15 m in width, the only available route to the mining site was a single lane highway, which made carrying the oversized loads extremely challenging. Aware of the complexities the road presented, our team developed a detailed traffic management plan with local road authorities in Australia.
